The Versatile Flooring Company Ltd aims at all times to minimise or remove any possible negative impact on the environment caused by the business activities of the company. As an example this may be the use of recycled PVC in the production of the flooring materials supplied by the company.

The company aims to achieve this in the following ways:

Use of products from companies that are manufactured in a manner where the impact on the environment is fully considered and controlled to minimise or remove any possible negative impact on the environment.

Use of products from companies who constantly review the manufacture process and products produced to ensure that any negative impact on the environment is continually evaluated and reduced. This includes the efficient use of resources, the use of renewable resources and the recycling of products where possible and practical.

Efficient management of our own business to ensure that resources are used as efficiently as possible and that the effects of our business activities are fully considered and controlled to minimise or remove impact on the environment.
