

Ecotile eliminates disruption, inconvenience and downtime. Your business can continue to operate whilst our experienced installation team work safely around you creating a tough, long-lasting floor for your warehouse.

The Challenge

You can find Ecotile in storage facilities, distribution centres and warehouses all over the world. Businesses require a durable, safe and smart looking floor that will stand the test of time and meet HSE requirements. Warehouses are some of the most demanding environments when it comes to the floor. Busy warehouses can run for 24 hours with continuous vehicle traffic and frequent movement of heavy loads. Facilities managers and directors should consider:

- **Durability** – Can the floor withstand heavy-duty usage
- **Environment** – Will traffic from fork trucks, HGVs and pallet trucks damage the floor?
- **Safety** – Fire retardant, slip resistant and anti-fatigue properties.
- **Downtime** – How can you minimise downtime during installation?
- **Maintenance** – Will you need to shut down areas to maintain the floor and how often?
- **Aesthetics** – Will the floor look smart and modern?
- **Walkways** – Can you create coloured walkways and traffic routes?

The Solution

Ecotile manufacture floor tiles designed to cope with demanding storage environments. Ecotile can help you create a seamless, low maintenance floor surface ideal for storage facilities with heavy vehicle traffic.

Choose from a wide variety of colours, create **colour marked walkways** and incorporate **safety signs** into the floor.

Our Clients Include:

Ecotile can be installed quickly over any hard surface **without downtime**, disruption or fumes. Simply tap the tiles together to create a safe and functional floor.
