

Ecotile garage & workshop flooring is designed to overcome almost any problematic installation issue, excessive wear, paint delamination, dust, damp or contamination.

The Challenge

Commercial Garages & Workshops use Ecotile because they require a tough, safe and dependable floor that will stand the test of time and look great. Workshops can be very demanding environments with heavy-duty usage, floor impacts and spillages. Busy garages & MOT centres can run for 24 hours with continuous vehicle traffic and frequent movement of heavy loads. Facilities managers and directors should consider:

- **Durability** – Can the floor withstand heavy-duty usage and high point loads?
- **Impact Resistance** – Will dropping tools etc. damage the floor?
- **Environment** – Will heavy vehicles mark the floor surface?
- **Safety** – Fire retardant, slip resistant and anti-fatigue properties.
- **Versatility** – Can you accommodate in-ground vehicle lifts?
- **Downtime** – How can you minimise downtime during installation?
- **Maintenance** – How often will you need to clean/repair the floor?
- **Aesthetics** – Will the floor look smart and presentable?
- **Spillages** – Is the floor chemical resistant?

The Solution

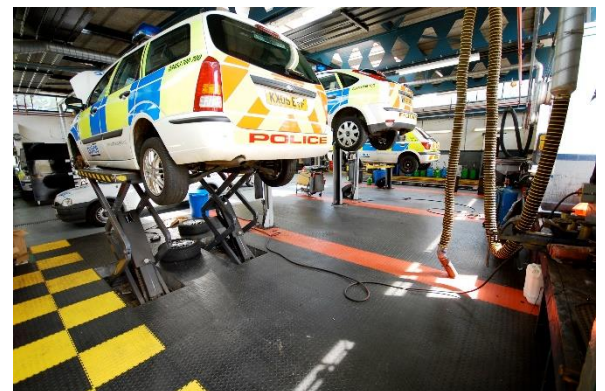

Ecotile manufacture heavy duty floor tiles designed to cope with demanding workshop environments. Our interlocking tile range is capable of withstanding **extremely heavy loads** (HGV's and tracked vehicles).

Choose from a wide variety of colours, create **colour marked bays** and incorporate **safety signs** into the floor.

Our Clients Include:

Ecotile can be installed quickly over any hard surface **without downtime**, disruption or fumes. Simply tap the tiles together to create a safe and functional floor.
