

Ecotile is the ideal alternative to traditional gym flooring. Available in a wide range of colours, Ecotile can withstand high point loads and isn't prone to curling or deforming over time.

The Challenge

Gyms and sport facilities require a safe, functional and smart looking floor that will stand the test of time. Due to the varied range of activities that take place in a gym, it can prove difficult to find a suitable impact resistant floor that ticks all the boxes. Facility managers need to consider the following:

- **Durability** – How long can the floor last under constant use?
- **Impact** – Can the floor cope with heavy weights being dropped?
- **Safety** – Fire retardant, slip resistant and anti-fatigue properties.
- **Noise** – Consider a floor that can reduce noise levels.
- **Maintenance** – How often do you need to clean the floor?
- **Aesthetics** – Will the floor look smart and modern?
- **Branding** – Can you brand the floor with sales messaging?
- **Surface** – How hard is the surface? Can you comfortably sit on the floor and does it absorb shock?
- **Function** – i.e ball bounce and other application specifics.
- **Repairs** – How easy is it to replace or repair an area of the floor?

The Solution

Ecotile manufacture floor tiles (in a wide range of colours) designed to cope with demanding gym environments. Ecotile can help you create a seamless, low maintenance floor surface ideal for sports, weight training and other activities. Our interlocking tile is soft enough to absorb impact and hard enough to cope with high point loads.

Ecotile can be installed quickly over any hard surface **without disruption** and requires minimal maintenance. Simply tap the tiles together to create a safe and functional gym floor.
